

TenFold-powered applications capture and maintain data that you need in your applications, even when you aren't certain when and how you want to see the data. EnterpriseTenFold lets you query and view data in different ways, so you always have the data you need to make rapid and critical business decisions. You can use queries to view data in a transaction, group and summarize data in multi-dimensional analyses, or view snapshots of your data in custom reports, filled-out forms, Microsoft Word documents or spreadsheets.

Maximizing Data teaches business analysts and IT experts to use quick and easy tools such as QueryByExample, PowerQuery™, QuickExport™, and Excel-It™ and two powerful TenFoldTools™ -- TenFold Analyzer™ and TenFold Reporter™. During this three-day class, an expert instructor teaches you to choose the right tool to extract and analyze data based on your needs; build powerful re-usable queries; design, build, and deploy reports and analyses, and more.

After Maximizing Data class, all applications database data is at your fingertips.

Duration 3 Days

Tuition \$3,000 per Student

Audience

Business analysts and IT experts responsible for creating or enhancing ways to turn raw applications data into formatted, organized information

Prerequisites

- Successful completion of TenFold Paradigm

Upon completion you

- Use QueryByExample to make any transaction a powerful data search engine
- Define, save, and rerun any query no matter how complex
- Dynamically export data from any grid-like display to Microsoft Excel
- Dynamically integrate a spreadsheet to your application as an input source or output destination at the click of a button
- Create multi-dimensional, interactive analyses to analyze applications database information
- Define, maintain, and package reports as part of an application

Class contents

Choosing the right reporting tool

- Use QueryByExample
- Use PowerQuery
- Use QuickExport
- Use Excel-It
- Use TenFold Reporter
- Use TenFold Analyzer

Using TenFold Analyzer

- Understand analyses and hierarchies
- Create an analysis using a set
- Identify components of an analysis
- Define, register, and view an Analysis
- Identify components of a hierarchy
- Define Hierarchies

Creating reports

- Learn the report development life cycle
- Display and limit data in your report
- Format report outputs using masks and tabs
- Do simple and advanced report calculations
- Integrate reports into your application
- Push reports to multiple destinations
- Create SmartForms and WordReports
- Run reports on a schedule or on demand
