

TenFold lets business analysts and IT professionals – working together – conceive, design, build, test, integrate, deploy, and maintain applications significantly faster and at a fraction of the cost of traditional technologies. By fundamentally changing the technology and methodology of applications development projects, TenFold offers a new paradigm for building enterprise applications.

During this class, an expert instructor gives you hands-on experience as you rapidly build a TenFold-powered application and learn the new TenFold paradigm. The class also surveys TenFold technology, so you see TenFold technologies automate business logic to suggest, calculate, and validate data; customize frame layouts and visual attributes; write reports; implement customized, rule-based security; automate testing; build OLAP analyses; brand applications, and much more.

Duration

5 Days

Tuition\$5,000 per Student

Audience

Applications developers (both IT professionals and business analysts), applications architects, technologists, and anyone else interested in learning more about the new TenFold paradigm.

Class Prerequisites

- Install EnterpriseTenFold SOA Personal Edition from www.tenfold.com
- Complete Building SuperCRM or Building SuperHR script
- Read Speed, Quality, Power, and EnterpriseTenFold SOA White Papers

Upon completion you

- Understand how EnterpriseTenFold SOA benefits your applications development cycle
- Built on-line database-intensive transactions
- Can work alongside an already-experienced mentor to contribute immediately on a project team
- Understand how EnterpriseTenFold accelerates database changes, version control, applications administration, regression testing, and more, reducing your applications time to market
- Have access to DocuManage, TenFold's complete repository of on-line reference materials for EnterpriseTenFold
- Identify learning paths through TenFold University for you and your staff to become experts in various aspects of TenFold technology

TenFold Paradigm class contents

- Build an application from ApplicationsSurvey to production-ready in one week, while learning how to use EnterpriseTenFold SOA
- Implement applications clients for both Microsoft Windows and browsers
- Regression test your application
- Integrate your application with external data sources, like flat files and web services, without programming
- Incorporate changes to your application, including the database design
- Secure your application using TotalSecurity
- Brand the windows and browser applications interfaces
- Take your work home with you if you bring your own EnterpriseTenFold SOA Personal Edition portable computer
- Understand TenFold service offerings

Survey TenFoldTools

During the class we survey (and incorporate into your application) advanced components of EnterpriseTenFold, including:

- PowerScoring
- PowerPost
- PowerAlert
- TenFold AutoTest
- TenFold Reporter
- TenFold Analyzer
- TenFold Connect
