

Every application you build with EnterpriseTenFold works perfectly in accord with 11 Quality attributes. (It might not do as you want, but it does as you described). By leveraging this TenFold-only, applications building and maintenance capability, TenFold AutoTest focuses testing only on a) whether your application has appropriate business functionality, and b) whether it continues to do so even as you change your application. TenFold AutoTest gives you the confidence you need to deliver applications changes into production rapidly.

Using TenFold AutoTest shares TenFold's new, innovative applications-testing approaches. During this two-day class, an expert instructor explains how to determine what to test; the meaning and value of regression testing; how to manage tests in an applications lifecycle; using tests as applications approval, documentation, and training tools; creating repeatable, automated tests; how TenFold AutoTest detects and reports applications changes; and more.

Duration 2 Days

Tuition \$2,000 per student

Audience

IT and business professionals seeking to decimate testing costs while dramatically increasing testing effectiveness.

Class prerequisites

- TenFold Paradigm class
- Read Quality White Paper

Upon completion you

- Understand TenFold paradigm for testing
- See how TenFold eliminates traditional QA testing,
- Can focus testing on business features
- Understand how UseCases define your application and train end-users
- Can use TenFold AutoTest automation to do high-quality testing
- Use TenFold AutoTest features that revolutionize testing strategies
- Are expert at creating, running, and maintaining tests
- Can review test results quickly and confidently

Using TenFold AutoTest class contents

Understanding automated tests

- Use AutoCapture to create a test
- PlayBack test
- Analyze test results

Understanding TenFold testing paradigm

- Define a UseCase
- List UseCases for an application
- Use a UseCase for teaching
- Understand regressions and their cost
- PlayBack tests and review differences
- Conduct nightly tests
- Manage tests in the applications lifecycle

Using TenFold AutoTest features

- Create filters
- Define and run test suites
- Execute ResetApplication
- Use MenuTester
- Use DateTimeManagement
- Maintain tests
- Understand and use DataMaker
- Measure applications performance
- React to performance alerts
